

Ramil Sususco

Infrastructure & Technical Operations Engineer

MSP Operations | Systems Administration | Migrations | Client Technical Support

Antipolo City, Rizal, Philippines (Remote) | hi@ramil.org | ramil.org

PROFESSIONAL SUMMARY

Infrastructure and technical operations engineer with 17+ years across web platforms, hosting and customer-facing technical support, including nine years in remote Linux systems administration for US-based operations. Progressed from billing and frontline support into responsibility for servers, virtualization, migrations, backups, monitoring and incident response. Experienced in translating technical findings into clear actions, planning low-disruption changes and documenting systems for reliable handoff. Bringing established infrastructure fundamentals into Microsoft 365, Entra ID and Azure environments.

CORE CAPABILITIES

- **Infrastructure operations:** Linux administration, cPanel/WHM, CloudLinux, KVM virtualization, monitoring, backup and recovery
- **Projects and modernization:** Environment review, dependency mapping, migration planning, controlled cutovers and post-change verification
- **Networking and services:** DNS, DHCP fundamentals, SSL/TLS, Cloudflare, VPNs, email routing and deliverability
- **Client guidance:** Technical support across the account lifecycle, risk explanation, written updates and asynchronous coordination
- **Standardization:** Runbooks, operating procedures, internal dashboards, API integrations and workflow automation

PROFESSIONAL EXPERIENCE

Squidix LLC - Infrastructure & Technical Operations

June 2017 to Present | Remote, supporting US-based hosting operations

- Progressed from billing and frontline support into responsibility for hosting infrastructure, including servers, virtualization, migrations, backups, monitoring and incident response, operating independently without a separate senior escalation engineer.
- Operate Linux hosting infrastructure supporting more than 800 WordPress websites across cPanel/WHM, CloudLinux and CageFS, including DNS, email and SSL services.
- Planned and executed an infrastructure migration covering approximately 500 clients and 800 websites through controlled batching, validation and coordinated customer communication.
- Migrated approximately 30 virtual machines from Virtualizor to VirtFusion without customer-visible downtime and support a 64-core KVM environment covering provisioning, capacity and maintenance.
- Investigate incidents across DNS, mail flow, SSL, provisioning and server performance, implementing permanent corrections that reduced recurring support from an earlier baseline of approximately 20 tickets per day.
- Manage the customer lifecycle through WHMCS, from provisioning and billing coordination to technical resolution, translating findings into clear client-facing actions.
- Standardize recurring work through runbooks, internal tooling and operational dashboards; maintain JetBackup recovery processes, MailChannels routing and monitoring across the estate.

Seoul.fm - Founder & Technical Operator

2008 to Present | Remote

- Operate a long-running production streaming platform, covering Linux servers, deployment, uptime, capacity, monitoring, backups and incident recovery.
- Maintain DNS, Cloudflare configuration and TLS for a public service with an international audience.

Tasjeel.ae - Hosting & Domain Operations Support

April 2024 to March 2025 | Remote, concurrent with Squidix LLC

- Supported hosting and domain operations, including account provisioning, DNS administration, billing processes, mail configuration and direct customer support.
- Resolved customer requests across time zones through clear written communication and documented operational actions.

SELECTED INFRASTRUCTURE ACHIEVEMENTS

- **Large estate migration:** Approximately 500 clients and 800 websites moved through staged execution, verification and customer coordination.
- **Virtualization modernization:** Approximately 30 VMs moved from Virtualizer to VirtFusion without customer-visible downtime.
- **Operational stabilization:** Repeat-cause remediation reduced a previous workload of roughly 20 daily tickets to a low steady state.
- **Backup and mail reliability:** JetBackup recovery operations plus SPF, DKIM, DMARC and MailChannels troubleshooting.

RELEVANT TECHNICAL PROJECTS

MX Sentinel - Email Delivery Observability

Production monitoring across 25+ servers and approximately 150,000 monthly messages, providing delivery-health reporting, incident visibility and infrastructure diagnostics. Go, PostgreSQL, Docker and monitoring dashboards.

CallSentry - Self-hosted Voice Service

Production service demonstrating API and telephony integration, service tracing, escalation handling, health monitoring and self-hosted deployment. Docker, PostgreSQL, REST APIs and webhooks.

Internal Operations Tooling

Dashboards, automation and documented procedures supporting provisioning, migration verification, backup checks and monitoring alerts.

TECHNOLOGY

Platforms: Linux, cPanel/WHM, WHMCS, CloudLinux, CageFS

Virtualization: KVM, Virtualizer, VirtFusion, VM provisioning and resource management

Networking and security: DNS, DHCP fundamentals, SSL/TLS, Cloudflare, VPNs, Tailscale, firewall fundamentals and network troubleshooting

Mail: MailChannels, SPF, DKIM, DMARC, routing and deliverability investigation

Reliability: JetBackup, backup and restore operations, service monitoring, alerting and incident investigation

Automation and integration: Docker, GitHub, REST APIs, webhooks, PostgreSQL, scripting and self-hosted services

MICROSOFT CLOUD DEVELOPMENT FOCUS

Transferring established infrastructure, identity, networking and migration fundamentals into Windows Server, Active Directory, Microsoft Entra ID, Microsoft 365 tenant administration, Azure, endpoint management and MSP RMM/PSA platforms. Direct production depth in these technologies is still developing.

WORK SETUP

- Based in Antipolo City, Rizal, about an hour from Metro Manila, with a dedicated home office and two independent internet connections, both with static IP addresses.
- Nine years of remote operations experience supporting international and US-based customers.
- Comfortable with US Central business hours; final availability subject to agreed start date.
